AFTER YOU PLUG IN

Start with the drive connected to your Android phone.
Your local model needs no account or subscription.

1 Open the installer

Unlock the phone. Open Files → USB drive → Android-Drive-Kit → apps. Tap AI-Drive-Offline_v0.10.1-usb.1.apk.

Android-Drive-Kit / apps

AI-Drive-Offline_ v0.10.1-usb.1.apk

Tap to install

App name: AI Drive Offline

Already installed? Open AI Drive Offline and continue at step 3.

2 Install and open

If blocked, tap Settings and enable Allow from this source for the file manager opening the APK. Go Back, then Install → Open.

Install unknown apps / Files

Allow from this source

Back to the install prompt:

Install → **Open**

If no permission prompt appears, just Install → Open.

3 Open Drive Memory

In AI Drive Offline, tap the top-left menu icon, then Drive Memory. Connect memory before you start chatting.

AI Drive Offline menu

Drive Memory →

Offline Toolkit

Models

This is the included offline app; its name is AI Drive Offline.

4 Choose USB folder

Tap Choose USB memory folder. In the picker, open USB → Android-Drive-Kit. Tap Use this folder → Allow.

Drive Memory

Choose USB memory folder

USB → Android-Drive-Kit

Use this folder → Allow

Drive connected · Verified save #1

Select Android-Drive-Kit itself. Internal and cloud storage are rejected.

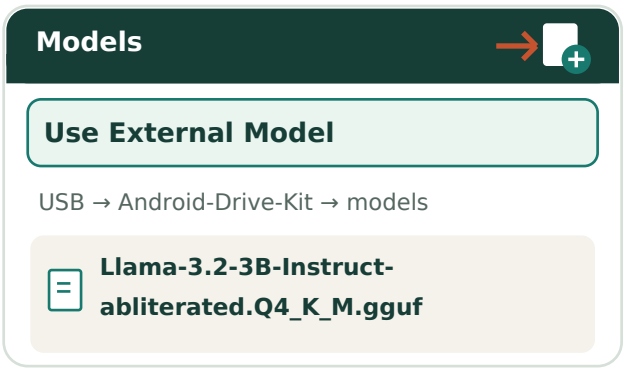

Keep the drive connected. Wait for Drive connected and Verified save #.

LOAD IT. START CHATTING.

The app runs Llama on your phone and saves your session to the USB drive.
Open menu → Models to continue.

5 Select the model

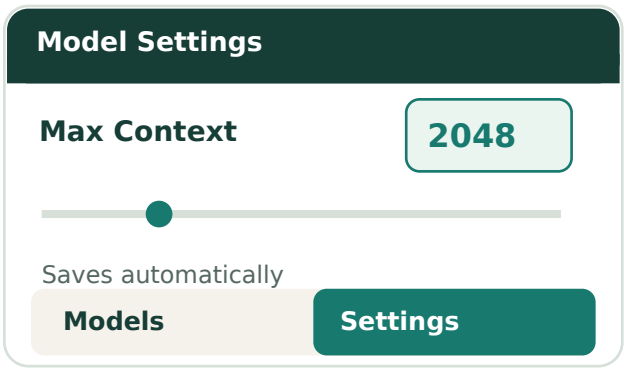

Tap the document-plus icon → Use External Model. In the picker, open USB → Android-Drive-Kit → models. Tap the .gguf file.

The model stays on the connected drive.

6 Set Max Context

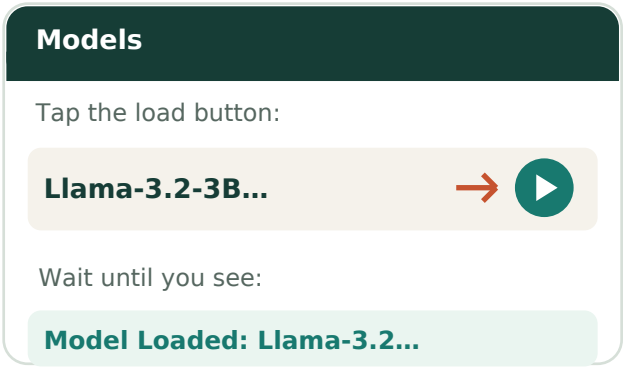

Tap the bottom Settings tab. Tap the Max Context number and enter 2048. Dismiss the keyboard, then tap the Models tab.

No Save button is needed; this value saves automatically.

7 Load and wait

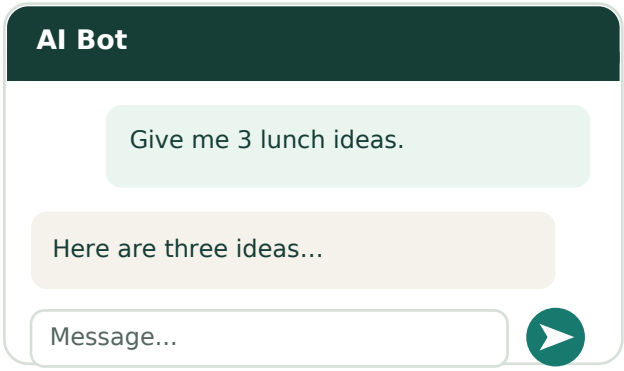

Tap the circular ▶ beside the model. Keep the phone open and wait until Model Loaded shows your model's name.

Loading may take a while. Leave the drive attached.

8 Send a message

Go Back to the home list and tap AI Bot. Type in Message... and tap the paper-plane send button.

Example: "Give me 3 lunch ideas."

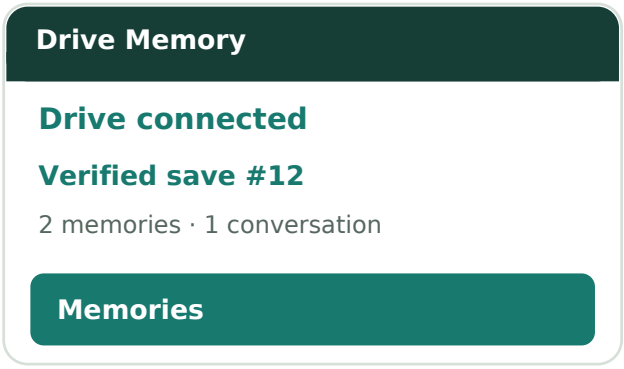

No internet permission: this app cannot use the network while your phone is online.

YOUR DRIVE REMEMBERS.

Chat history, preferences, facts and notes save to the selected USB folder.
Keep the drive attached and check the verified save status.

9 Automatic memory

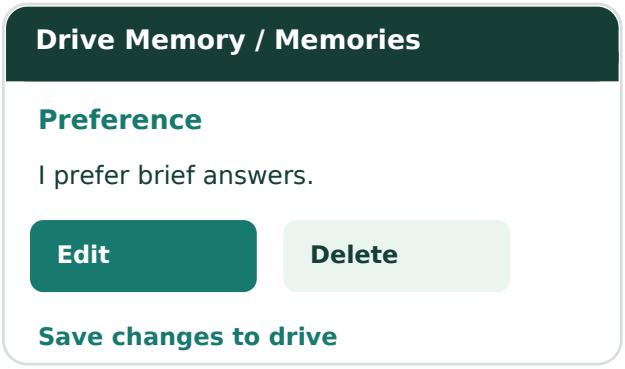

Messages save automatically. Clear statements such as “I prefer brief answers” or “Remember that…” also become saved memories.

Drive Memory shows Verified save # after a save is checked.

10 Review and edit

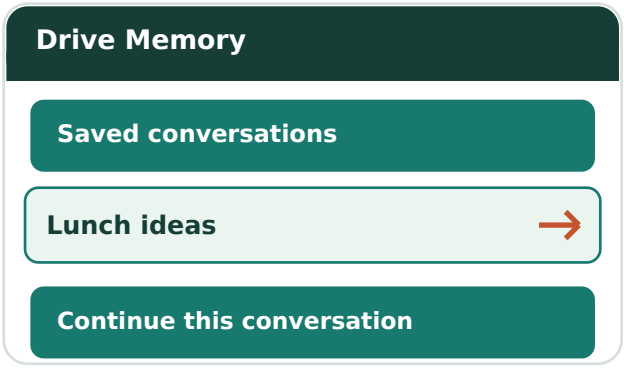

Open Drive Memory → Memories. Choose Edit, change Memory text, then Save changes to drive. Choose Delete to forget an entry.

Deleting a memory leaves its original message in saved chat history.

11 Continue a chat

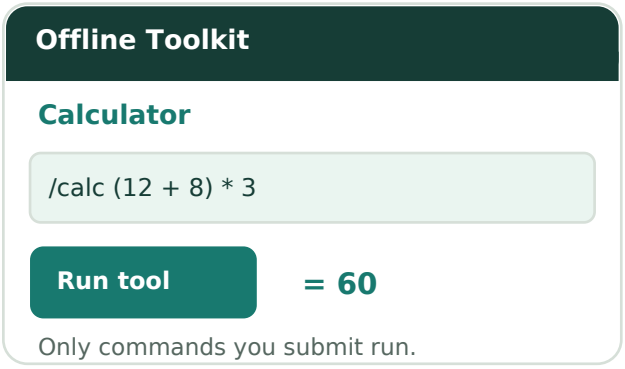

Open Drive Memory → Saved conversations. Tap a conversation, then Continue this conversation to pick up where you left off.

On another Android phone, select this same USB folder again.

12 Use offline tools

Open menu → Offline Toolkit. Tap Calculator, then Run tool. You can type /help or these commands in a chat too.

Notes: /note Shopping | Milk, bread. List them with /notes.

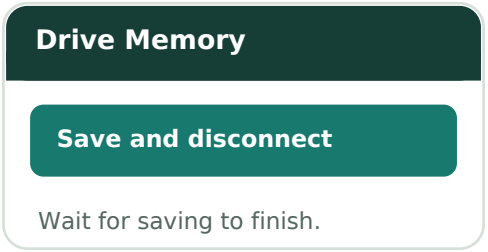

Try /remember I prefer brief answers • /memories • /notes • /help

SAVE. DISCONNECT. RETURN.

Finish in the app before removing the drive. Your saved files stay on the USB.
The app clears personal data from its session when you disconnect.

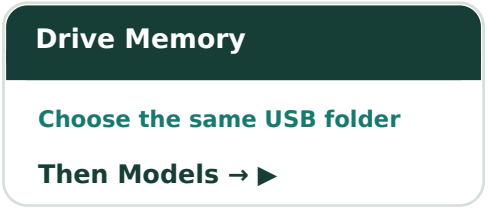

1 Before you remove the drive

Open menu → Drive Memory. Tap Save and disconnect, then confirm Save and disconnect. Let saving finish. In menu → Models, unload with × if a model remains loaded. Use Eject if offered, then remove the drive.

2 Next time / another Android phone

Open AI Drive Offline → menu → Drive Memory. Tap Choose USB memory folder or Reconnect / choose folder; select the same USB → Android-Drive-Kit folder and Allow. Load the model in Models, then continue your saved chat.

QUICK HELP

Drive unavailable / save fails	Reconnect, then Drive Memory → Reconnect / choose folder. Re-select the same USB folder. Do not remove it while Saving / checking drive… shows.
No reply / model will not load	Connect memory, then check Models shows Model Loaded. Close other apps; try Max Context 1024 if 2048 fails. Re-select the .gguf if needed.
A previous save was restored	An interrupted snapshot may recover an earlier verified save. Check recent messages and memories before continuing. Keep the USB files.
Memory limit reached	Each snapshot allows about 32 million characters. A full save fails visibly; it never silently cuts history. Keep your files and resolve the error before disconnecting.

USB memory files are readable plaintext; protect the drive. Illustrations show the intended controls. Physical Android / USB compatibility is still untested.
